Java
JavaScript | TypeScript
Angular
React
SQL
REST APIs
CI/CD
Linux/Unix
Git
Istio
Test Automation (Selenium | Mockito)
Agile | Scrum
MEDDIC
SAFe PO/PM
Jenkins

Certifications

Microsoft Certified: Azure AI
Fundamentals
January 2025

APM & Distributed Tracing
Fundamentals
July 2024

Datadog Fundamentals
July 2024

Log Management Fundamentals
June 2024

SAFe Product Owner / Product
Manager (POPM)
July 2019

Profile

Software Engineer, Solutions Engineer, Product Owner, and Team Lead with 12+ years building customer-centric, scalable cloud, and full-stack solutions. Delivered high-impact features built in Go, Python, Angular, and Java across microservices and Kubernetes-based platforms. Known for bridging engineering, product, and go-to-market teams—translating complex requirements into measurable outcomes and accelerating time-to-value.

Experience

NetApp - Boulder, CO | Remote

Software Engineer

February 2025 — Present

- Shipped core FlexCache workflows and features for Google Cloud NetApp Volumes; contributed to APIs, business logic, and database changes.
- Partnered directly with Google engineering to align UI/workflows and stabilize API contracts across releases.
- Drove operational readiness (specs, reviews/approvals) and led defect triage/war-room execution to deliver on schedule.
- Bootstrapped test automation environments and authored team setup documentation to improve repeatability and coverage.

Software Engineer | Product Owner

August 2018 — April 2023

- Built full-stack features across HCI/HCC and Astra using Python, Go, Angular/TypeScript in Kubernetes-based hybrid-cloud platforms.
- Delivered secure/HA deployment capabilities, including mTLS enablement and service configuration via Helm charts, reconcile loops, and Envoy sidecars.
- Drove cross-functional alignment (engineering, solutions engineering, leadership); helped launch an AR-guided installation concept that reduced “white glove” installs by 2+ weeks.
- Served as Product Owner (SAFe POPM), validating requirements, running sprint demos, and partnering with Product on roadmap prioritization.
- Improved onboarding at scale by rewriting documentation and contributing to processes used for 100+ new hires.

Datadog - Denver, CO

Solutions Engineer

May 2024 — February 2025

- Led technical discovery, demos, and proof-of-value engagements with AEs; guided installs/instrumentation and removed blockers during trials.
- Achieved 87% technical win rate across competitive evaluations by aligning architectures to customer outcomes.
- Built and demoed LLM observability agents (LangChain/LangServe, OpenAI, FastAPI, FAISS) and delivered enablement sessions for SE teams.
- Positioned as Kubernetes SME (8+ years of experience), mentoring junior SEs and creating onboarding/training content.

Micro Focus | Hewlett-Packard Enterprise | Hewlett-Packard - Fort Collins, CO

Software Engineer | Software Engineer in Test

June 2014 — July 2018

- Built and tested Hybrid Cloud Management features using Java (Spring/Hibernate), SQL, and microservices on Docker/Kubernetes; supported install testing and troubleshooting with Jenkins.
- Helped decompose a monolith into Kubernetes-deployed services; contributed to service design and containerization workflows.
- Expanded Selenium-based UI automation with reusable tests; partnered with frontend engineers to improve testability standards.
- Mentored interns and led an ELK/observability proof-of-concept to improve log analytics and troubleshooting.

Education

Colorado State University Bachelor of Science, BS - Computer Science
